Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: .state. Grains and nuggets of this metal occur in the sands of rivers in the Ural Mountains, Borneo, California, etc. It is a white, very malleable and ductile metal, which never tarnishes, since platinum does not combine directly with oxygen at any temperature. No single acid can dissolve platinum, but aqua regia, or any liquid capable of evolving chlorine will attack it. The high fusing-point of platinum--about 4,000 deg. Fahr.--and its power of resisting chemical action, specially fit it for use in the chemical laboratory, and render it serviceable to the photographer. Platinum crucibles, basins, spatulas foil and wire are frequently required. Platinum crucibles should never be put naked into a coke or charcoal fire, but always placed within a covered earthen crucible. They should never be used for melting any of the oxides of a readily fusible metal, such as lead or tin, as these metals will combine with the platinum and form an alloy, and the vessel will be destroyed. Copyrighted. Platinum Tetrachloride (platinic Chloride). Formula, $PtCl_4+5H_2O$. Combining weight, $336 + 90 = 426$. Prepared by dissolving platinum in aqua regia and evaporating several times, each time adding hydrochloric acid. A compound having the formula $PtCl_4 + H_2O$ is thus obtained, from which the hydrochloric acid may be expelled by heat. Platinic chloride forms red crystals, which are soluble in water, producing an orange-colored solution. When strongly heated, platinic chloride parts with two atoms of chlorine and is reduced to platinous chloride, $PtCl_2$. Platinic chloride combines...
