Excerpt from Indispensable Orthopaedics, Vol. 2: A Handbook of Treatment Amongst the Orthopaedic affections, Scoliosis is, I believe, that which most embarrasses the practitioner. In the presence of the multiple and diverse theories held by authors as to the nature of this malady, he does not know what to believe: among the different treatments proposed, he does not know which he must choose, and if he choose one, he does not know exactly in what way to apply it, in order to reap some benefit. In the end he does nothing. I call it doing nothing, and avoiding doing anything, when he confines himself to prescribing strengthening wines, and furnishing the address of a manufacturer who will make some kind of corset, and thus frees himself from all responsibility. How disastrous to the patient is this indifference of the practitioner who sees the Scoliosis from the onset, from the moment when it is yet in an early stage! And how annoying it must be to the practitioner himself, who will be held in poor esteem by the parents, when they see their child become more and more deformed without anything being done to prevent the progress of the deformity! I would like to protest against this tendency, and to persuade practitioners that they are able, and ought henceforth, to assume a different attitude with regard to the essential scoliosis of adolescence. They must look the malady in the face, frankly, bravely, and deal with it with the same confidence they deal with the other orthopaedic affections.
