It was soon found that other substances besides amber and hair show electric attraction. Isaac Newton hung a round piece of glass in a brass ring fixed about an inch above a table. He rubbed the glass with some rough and raking stuff, till some very small fragments of very thin paper laid on the table beside the glass began to be attracted and moved nimbly to and fro, leaping upon the glass and remaining there a while, then leaping down and resting there, then leaping iip and perhaps down and up again. This experiment is repeated easily by rubbing a stick of sealing wax with a woollen cloth, and holding it over small bits of paper. Instead of rubbing amber or glass, Guericke rubbed a ball of sulphur with his hands. He made this ball by filling a...
