LAP Lambert Academic Publishing Jun 2015, 2015. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - Population projection for many developing countries like Bangladesh could be quite a challenging task. The objective of this paper is to compare between different types of population models and to find out the most suitable population models for long term population projection. We represented some population models such as Malthusian model, Logistic model, Gompertz model and Schaefer model to investigate their solution and plot their graphs. We predicted the human population of Bangladesh during 1980 to 2080 by applying both Malthusian and Logistic models using the actual population data of 1980 to 2013 from World Bank. The study reveals that short time population prediction is more accurate in Malthusian model. But in long term prediction, population growth is more unrealistic. But Logistic model is more realistic in long term prediction as compared to Malthusian model. Our work touched a little part of it. The realistic prediction of human population in future is very essential. We believe that extensive and continuous involvement in population dynamics research may result in to answer many questions and also may bring tremendous achievements for the next generation. 80 pp. Englisch.
