Createspace, United States, 2014. Paperback. Book Condition: New. 252 x 178 mm. Language: English . Brand New Book ***** Print on Demand *****.This work is about sharing the local (as well as global) resources and services of the planet to meet the needs of all living beings and their community patterns. It uses ecological design to create a simple method to implement and manage the sharing. First, we assess what the local place needs to develop in a stable flow, then we set aside a satisfactory area of the place to ensure the continuing operation of evolution in wild systems. Next, we measure the ranges of productivities of wild ecosystems as well as agricultural and urban systems, then use those results to determine optimum human populations for local places, regions and the planet. Within human systems, every culture would claim a share of local resources and global services not set aside for wild regeneration. Ecological design would work on global and regional scales, as well as the local scale. For example, the Colorado river would be allocated a percentage of water to keep the river and its downstream ecosystems (including shallow ocean canyons) healthy-this may require 50 or more of all the water flow. The remaining water would be divided between resident cultures sharing the river environments upstream. This approach promises a fair way to deal with carbon emissions, toxic wastes, and energy use, also. The equal apportionment of resources to all cooperating participants in the global commons (identified with the new word Koinomics -See glossary for neologisms and terms) is supported by the theory and practice of recognizing and honoring the legacy of the entire planet that hosts its legatees as tenants (identified here as Legatism) and is supported by the rule of all beings (identified as Panocracy...
