The LLTF conducted an independent evaluation of the NRCs regulatory processes to ensure reactor vessel head integrity and identified and recommended areas of improvement. One of the recommendations of the task force was to assess the reactor coolant system ( RCS ) leakage requirements for potential improvements that could provide enhanced safety. Specifically, the requirements needed to be evaluated for sufficiency to ( a ) provide the ability to discriminate between the RCS unidentified leakage and the reactor coolant pressure boundary ( RCPB ) leakage; and ( b ) provide reasonable assurance that plants are not operated at power with RCPB leakage. The NRC Regulatory Guide 1. 45 describes the RCPB leakage detection systems and states the regulatory position that the sensitivity and leakage should be response time of each leakage detection system employed for unidentified adequate to detect a leakage rate, or its equivalent, of one gallon per minute ( gpm ) in less than one hour. The NRC staff recognizes...
